

1- 3 July 2024

University of Modena and Reggio Emilia
Department of Life Sciences and C.I.G.S.
University Campus - Via Campi - Modena

During this Summer school we will explore the techniques, the instrumentations and the application of proteome analysis to better understand the process of pathologic calcification. Metabolomics and lipidomics will be also addressed. Furthermore, one session will be entirely dedicated to the analysis and interpretation of data. The course is dedicated to those who are interested in approaching these techniques or to those who have already some experience and are looking for further information in the context of ectopic calcification.
